Acceptance of inequality between children: Large-scale experimental evidence from China and Norway

Overview

Identification	Acceptanceofinequalitybetweenchildren
-----------------------	---------------------------------------

Abstract

In a novel large-scale experiment, we study how adults in two societies, Shanghai (China) and Norway, make real distributive decisions involving children. We find that acceptance of inequality between children increases with the age of the children, is affected by the source of inequality and the cost of redistribution, and is lower than acceptance of inequality between adults. We document a large cross-societal difference in inequality acceptance: adults in Shanghai implement twice as much inequality between children compared with adults in Norway. Finally, we show that the willingness to accept inequality between children is predictive of attitudes to child policies.

Unit of Analysis	Individuals
-------------------------	-------------

Scope & Coverage

Keywords	inequality acceptance, experiment, social preferences, children
-----------------	---

Countries	China, Norway
------------------	---------------

Geographic Coverage

Shanghai (China) and Norway

Universe

Adult population in Shanghai that has lived and worked in Shanghai for more than two years and the Norwegian adult population.

Producers & Sponsors

Primary Investigator(s)	Cappelen, Alexander W. Falch, Ranveig Huang, Zhongjing Tungodden, Bertil

Funding Agency/ies	Institute for Applied International Studies (Fafo) NORFACE (New Opportunities for Research Funding Agency Co-operation in Europe) Network European Research Council Project FAIR Research Council of Norway
---------------------------	--

Sampling

Sampling Procedure

The data is from an online experiment with general population samples from Shanghai (China) and Norway. The adult participants were recruited through two data-collection agencies, Opinion Research Shanghai in Shanghai and Norstat in

Norway. We recruited 3,000 adult residents in Shanghai (China) and 3,014 adult residents in Norway in the main study in 2018, and 1,500 adult residents in Shanghai and Norway.

Weighting

In mmChina_Norway2018_release and mmChina_Norway2023_release weighting is defined by the data collection agency in charge of the respective data collection.

Statistics [NW/ W] [Valid=3014 /-] [Invalid=0 /-]

Definition The level of agreement with statement about children being responsible for their own choices.

Literal question Vi ønsker nå at du skal indikere i hvilken grad du er enig i følgende påstander. 1 betyr at du er helt enig i påstanden til venstre, 10 betyr at du er helt enig i påstanden til høyre, og tallene i mellom indikerer i hvilken grad du er enig eller uenig i påstandene:
 1. Barn bør holdes ansvarlige for sine egne valg
 10. Barn bør ikke holdes ansvarlige for sine egne valg

(We now want you to indicate to what extent you agree with the following statements. 1 means that you completely agree with the statement on the left, 10 means that you completely agree with the statement on the right, and the numbers in between indicate the extent to which you agree or disagree with the statements:
 1.Children should be held responsible for their own choices.
 10. Children should not be held responsible for their own choices.)

Notes Barn holdes ansvarlige for sine egne valg. (Vi ønsker å se at du skal indikere i hvilken grad du er enig i følgende påstander)

Value	Label	Cases	Percentage
1	1	207	6.9%
